Project Description and Scope of Project

A. Description of the Transmission Scheme

Existing 220/132 kV network utilized for evacuation of RE power is insufficient and generation has to be curtailed in peak solar hours due to congestion in existing transmission network around Solapur/Akkalkot. Establishment of 400 kV Sub-station in RE rich area of Wagdari, Akkalkot, South Solapur, will facilitate removal of constraint in RE power evacuation and shall enhance the evacuation capacity by 1.5 - 2 GW.

The subject Transmission system was deliberated and approved in the 7th meeting of the Empowered Committee held on 12.03.2025. Government of Maharashtra vide Gazette notification dated 09.04.2025 has appointed PFCCCL as BPC for implementation of the subject transmission scheme through TBCB route.

Annexure-VI: Procedure for calculation of Transmission System Availability for a Month

1. Transmission system availability for a calendar month shall be computed by the respective Transmission Licensee, and certified by the MSLDC, separately for each AC and HVDC transmission system. For the purpose of calculation of Transmission System Availability:
- AC transmission lines: Each circuit of AC transmission line shall be considered as one element.
 - Inter-Connecting Transformers (ICTs): Each ICT bank (three single phase transformer together) shall form one element.
 - Static VAR Compensator (SVC): SVC along with SVC transformer shall form one element. However, 50% credit to inductive and 50% to capacitive rating shall be given.
 - Bus Reactors/ Switchable line reactors: Each Bus Reactors/ Switchable line reactors shall be considered as one element.
 - HVDC Bi-pole links: Each pole of HVDC link along with associated equipment at both ends shall be considered as one element.
 - HVDC back to back Station: Each block of HVDC back to-back Station shall be considered as one element. If associated AC line (necessary for transfer of inter-regional power through HVDC back-to-back Station) is not available, the HVDC back-to-back Station block shall also be considered as unavailable.
2. The Availability of AC and HVDC portion of Transmission system shall be computed as under:

% Availability for AC system

$$\frac{o \times AV_o + p \times AV_p + q \times AV_q + r \times AV_r}{o + p + q + r} \times 100$$

% Availability for HVDC system

$$\frac{s \times AV_s + t \times AV_t}{s + t} \times 100$$

- AV_o = Availability of o number of AC lines.
 p = Total number of bus reactors/switchable line reactors.
 AV_p = Availability of p number of bus reactors/switchable line reactors;
 q = Total number of ICTs.
 AV_q = Availability of q number of ICTs.
 r = Total number of SVCs.
 AV_r = Availability of r number of SVCs.
 s = Total number of HVDC poles.
 AV_s = Availability of s number of HVDC poles.
 t = Total number of HVDC back-to-back Station blocks.
 AV_t = Availability of t number of HVDC back-to-back Station blocks

3. The weightage factor for each category of transmission element shall be as under:
- (a) For each circuit of AC line – Surge Impedance Loading (SIL) for Uncompensated line multiplied by ckt-km.
- SIL rating for various voltage levels and conductor configurations is given in Appendix-I. However, for the voltage levels and/or conductor configurations not listed in Appendix-I appropriate SIL based on technical considerations may be used for availability calculation under intimation to long-term transmission customers/DICs.
- For compensated AC line, SIL shall be as certified by the Maharashtra State Power Committee (MSPC) Secretariat considering the compensation on the line.
- For shunt compensated line, the reduced value of SIL shall be taken in accordance with the location of the reactor. Similarly, in case of the lines with series compensation, the higher SIL shall be taken as per the percentage of compensation.
- (b) For each HVDC pole- The rated MW capacity x ckt-km
 (c) For each ICT bank – The rated MVA capacity
 (d) For SVC- The rated MVAR capacity (inductive and capacitive)
 (e) For Bus Reactor/switchable line reactors – The rated MVAR capacity.
 (f) For HVDC back-to-back Station connecting two Regional grids- Rated MW capacity of each block

4. The availability for each category of transmission element shall be computed based on the weightage factor, total hours under consideration and non-available hours for each element of that category. The formulae for calculation of Availability of each category of the transmission elements are as per Appendix-II.
5. The transmission elements under outage due to following reasons shall be deemed to be available:
 - i. Shut down availed for maintenance or construction of elements of another transmission scheme. If the other transmission scheme belongs to the Transmission Licensee, the MSLDC may restrict the deemed availability period to that considered reasonable for the work involved.
 - ii. Switching off of a transmission line to restrict over voltage and manual tripping of switched reactors as per the directions of MSLDC.
6. Outage time of transmission elements for the following contingencies shall be excluded from the total time of the element under period of consideration:
 - i. Outage of elements due to acts of God and force majeure events beyond the control of the Transmission Licensee. However, onus of satisfying the MSLDC that element outage was due to aforesaid events and not due to design failure shall rest with the Transmission Licensee. A reasonable restoration time for the element shall be considered and any additional time taken by the Transmission Licensee for restoration of the element beyond the reasonable time shall be treated as outage time attributable to the Transmission Licensee. Circuits restored through ERS (Emergency Restoration System) shall be considered as available.
 - ii. Outage caused by grid incident/disturbance not attributable to the Transmission Licensee, e.g., faults in substation or bays owned by other agency causing outage of the Transmission Licensee's elements, and tripping of lines, ICTs, HVDC, etc. due to grid disturbance. However, if the element is not restored on receipt of direction from RLDC while normalizing the system following grid incident/disturbance within reasonable time, the element will be considered not available for the period of outage after issuance of RLDC's direction for restoration.
